Profile

Versatile Mobile Developer with strong expertise in native Android development and cross-platform solutions using React Native and Flutter. Proven track record of building real-time monitoring features, geolocation services, background processes, and enterprise project management tools. Focused on application performance, stability (ANR/crash mitigation), and seamless backend integration.

Skills

Mobile Development: Kotlin, Swift, Jetpack Compose, React Native, Flutter/Dart, Android SDK, Native Modules, Gradle, FCM, Notifee

Architecture & Tools: TypeScript, JavaScript, Java, WebRTC, Socket.IO, Firebase Crashlytics, REST APIs, Dio, Provider (MVVM), Freezed, Prisma, Jenkins, Git

Work Experience & Projects

Media Aerea

Mobile Software Engineer

Ciudad Obregón, México

2023 – Present

Project: Sentinel (Native Android)

Developed and optimized a real-time monitoring application focused on device tracking, background data collection, and live streaming capabilities.

- Developed core Android features for real-time device monitoring, geofence detection, and high-accuracy background location tracking.
- Implemented robust background services for device status reporting, media capture, and asynchronous data synchronization with backend APIs.
- Integrated live streaming and real-time communication workflows utilizing **Socket.IO** and **WebRTC** technologies.
- Enhanced app stability by resolving production issues (`OutOfMemoryError`, ANRs, `NetworkOnMainThreadException`) using **Firebase Crashlytics**.
- Collaborated with backend teams (**JavaScript / Prisma**) to design robust and secure device-to-server data synchronization protocols.

Project: MAERP Mobile (React Native)

Built the cross-platform mobile extension of an enterprise ERP platform, replicating complex web business logic into a seamless mobile UX.

- Architected and built the React Native mobile application from scratch (React Native CLI & TypeScript) using a clean, scalable modular architecture.
- Developed complex project management modules, including interactive **Kanban boards**, task tracking, subtasks, dynamic card rendering, and real-time collaboration features.
- Integrated **Firebase Cloud Messaging (FCM)** and **Notifee** to implement targeted push notifications, significantly improving user daily engagement.
- Engineered a custom Android native update mechanism to perform remote version checks and handle controlled, in-app APK downloads.
- Implemented secure authentication flows and token-based REST API consumption, handling complex loading states and structured data caching.
- Resolved complex platform-specific issues regarding native modules, SVG rendering, Gradle build configurations, and environment dependencies.

Personal Projects

Personal Project

Flutter 5e Character & Tools App

Published on Google Play

2026 – Present

Flutter/Dart mobile app for creating and managing Dungeons & Dragons 5e characters, published independently on the Google Play Store.

play.google.com/store/apps/details?id=com.dnd5e.characterNTools

- Designed a clean MVVM architecture using **Provider**, refactoring a monolithic view model into specialized, testable ViewModels (skills, equipment, languages, spells).
- Built a Repository layer with **Dio** to consume the public **Open5e REST API** (classes, races, backgrounds, feats, spells, bestiary), including robust error handling and fallback endpoints.
- Implemented immutable data models with **Freezed** and **json_serializable** for type-safe, predictable state.
- Engineered programmatic PDF generation, filling the official 3-page D&D character sheet via **Synctfusion PDF** (form field writing + flattening), with an in-app PDF viewer and share/export via **share_plus**.
- Added local persistence and environment-based configuration using **shared_preferences**, **path_provider**, and **flutter_dotenv**.
- Shipped an integrated tools suite (dice roller, HP tracker, notes) plus an animated light/dark theme.

Education

Instituto Tecnológico de Sonora (ITSON)

Bachelor's Degree in Software Engineering, Degree Conferred & Fully Licensed

Ciudad Obregón, México

June 2025
